Accepted 24 December 2011

\textsuperscript{1}Data used in the preparation of this article were obtained from the Alzheimer’s Disease Neuroimaging Initiative (ADNI) database (http://www.loni.ucla.edu/ADNI). As such, the investigators within the ADNI contributed to the design and implementation of ADNI and/or provided data but did not participate in analysis or writing of this report. ADNI investigators include (complete listing available at http://adni.loni.ucla.edu/research/active-investigators/).

Supplementary Figure 1. Receiver Operating Curves of significant predictors of conversion to Alzheimer’s disease in the old age cohort (>74 years, n = 88). The figure visualizes the middle column of Table 2. Memory: ADAS-cog delayed recall of word list. Amyloid: amyloid-\textbeta in CSF. Atrophy: inferior-temporal volume on MRI. Combined: ADAS-cog delayed recall and inferior-temporal volume combined.
