Values of MD of fiber bundles for the three groups								
		YG Mean ± SD	OL Mean ± SD	AD Mean \pm SD	<i>p</i> -value			
					YG-OL	YG-AD	OL-AD	
MD (um/s)	Genu	0.795 ± 0.023	0.864 ± 0.065	0.901 ± 0.051	0.001	0.000	0.093	
	L-AIC	0.766 ± 0.018	0.841 ± 0.062	0.884 ± 0.071	0.002	0.000	0.096	
	R-AIC	0.780 ± 0.025	0.848 ± 0.047	0.882 ± 0.052	0.000	0.000	0.072	
	Splen	0.861 ± 0.048	0.934 ± 0.073	0.972 ± 0.065	0.006	0.000	0.255	
	L-PIC	0.740 ± 0.026	0.775 ± 0.043	0.789 ± 0.035	0.024	0.001	0.735	
	R-PIC	0.763 ± 0.019	0.793 ± 0.032	0.814 ± 0.038	0.027	0.000	0.149	

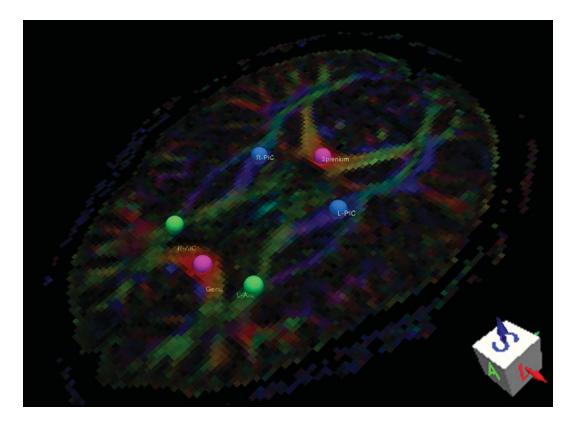

Supplementary Table 1 Values of MD of fiber bundles for the three grour

YG, Normal young adults; OL, normal old adults; AD, AD patients. L, Leftside; R, rightside; Genu, fibers originating from the genu of corpus callosum. L-AIC, fibers originating from the left anterior internal capsule and external capsule. L-PIC, fibers originating from the left posterior internal capsule; Splen, fibers originating from the splenium of corpus callosum. The *p*-value is shown for the difference among three groups, and it is in boldface when the difference reaches significant level, p < 0.05, Bonferroni correction.

Supplementary Table 2
Significance in post-hoc (Bonfferoni correction) comparisons of DA and DR for all
six fiber bundles in the three groups

	YG-OL	YG-AD	OL-AD
DA Genu	0.315	0.276	1.000
DA L-AIC	0.076	0.000	0.147
DA R-AIC	0.012	0.000	0.179
DA Splen	0.000	0.000	1.000
DA L-PIC	0.101	0.001	0.292
DA R-PIC	0.301	0.004	0.266
DR Genu	0.016	0.000	0.449
DR L-AIC	0.001	0.000	1.000
DR R-AIC	0.000	0.000	0.428
DR Splen	0.205	0.001	0.168
DR L-PIC	0.048	0.016	1.000
DR R-PIC	0.046	0.000	0.341

DA, Axial diffusion; DR, radial diffusion; YG, normal young adults; OL, normal old adults; AD, AD patients. L, leftside; R, rightside; Genu, fibers originating from the genu of corpus callosum. L-AIC, fibers originating from the left anterior internal capsule and external capsule. L-PIC, fibers originating from the left posterior internal capsule; Splen, fibers originating from the splenium of corpus callosum. The *p*-value is in boldface when the difference reaches significant level, p < 0.05, Bonferroni correction.

Supplementary Figure 1. Six ROIs shown for a normal elderly in tractography study. Six 2-mm balls in FA map represent the seed areas from where six fiber bundles originated. ROI in genu of CC was drawn in the most central position of genu among transverse/sagittal/coronal sections; ROI in splenium of CC was drawn in the most central position of splenium among transverse/sagittal/coronal sections. Fiber bundles seeding from red balls mainly run transversely. ROI of left and right AIC was drawn in the same transverse plane with ROI of genu, and the position was selected to cover the biggest number to fiber bundles generated from AIC and EC. Fiber bundles seeding from green balls mainly run longitudinally. ROI of left and right PIC was drawn in the same transverse plane with ROI of splenium, and the position was ensured to cover the biggest number to fiber bundles generated from corticospinal tract. Fiber bundles seeding from blue balls mainly run perpendicularly. The overall Pearson correlation of test-retest scores was 0.96 (p < 0.01). A, Anterior; L, leftside; S, superior.
