Data are presented as means (\pm SD) or as numbers (%) unless otherwise indicated. Significant p-values are presented in bold. aMCI = amnestic mild cognitive impairment; naMCI = non-amnestic mild cognitive impairment; hsCRP = high sensitivity C-reactive protein; BMI = body mass index; Waist-to-hip ratio (WHR: overweight: women 0.8–0.84; men 0.9–0.99; obese: women >0.85; men >1.0); LDL = low-density lipoprotein; HDL = high-density lipoprotein; JNC 7 = Joint National Committee on Prevention, Detection, Evaluation, and Treatment of High Blood Pressure: stage 1 = 140–159 mmHg, stage 2 \geq 160 mmHg; HbA1c = Hemoglobin A1c; NSAID = non-steroidal anti-inflammatory drugs; Q_{1/2/3/4} = Quartile (1/2/3/4); ε4 positive = at least one ε4 allele (ε2/ε4, ε3/ε4, ε4/ε4); [†]*n* = 8 (baseline) and *n* = 11 (follow-up) MCI participants were excluded because of hsCRP >10 mg/l; ^{††}genotyping not available for *n* = 8 participants (7 aMCI/1 naMCI).
